

A-BUS
**Multi-Source/
 Multi-Zone**

**Top 10 Reasons Why Customers Will
 Choose Honeywell's A-BUS Multi-Source
 Multi-Zone Audio Distribution**

Flexibility	Any of four individual audio sources can be selected and controlled in up to four zones (two different pairs of speakers in each zone) per hub.
A-BUS Technology	Designed on proven, patented A-BUS IP technology to provide a quality solution.
Compatibility	Integrates with existing audio components no matter where they are located in the home, so long as they are connected to the distributed audio entertainment network.
Available at ADI	The products are conveniently stocked at ADI locations throughout North America.
Local Input	Provides the ability to override the selected playback source in any zone using a local source input module, so playback from that device is heard within that same room.
Integrates with Structured Wiring	The main or expansion hubs accept four sources, deliver sound to eight zones per hub and fit into Honeywell structured enclosures.
Expandable	Add up to eight zones at a time with optional expansion hub.
Attractive	Modern, clean design compatible with standard J-Boxes and Decora wallplates. Elegant faceplates (without screws) can also be used.
Easy to Install and Operate	No programming is required! The single Cat5 wire run to each room's control keypad and short wiring to speakers from there—delivering intuitive user control of source selection, volume control as well as turning the system on or off either locally or through the entire room.
Affordable	No long speaker wire runs or amplifiers—the keypads <i>are</i> the amplifiers.
