

Honeywell
THE POWER OF **CONNECTED**

Environmental Sensors

**Put a damper
on flood and extreme
temperature damage**

REDUCING RISK

Damages from floods and extreme temperatures can cause personal and financial devastation for home and business owners. In fact, they're in the top five of the leading causes of insurance claims. Whatever the installation challenge, Honeywell's Environmental Sensors can play a critical role in helping your customers stop the damage before it starts.

They can:

- Monitor kitchens, basements, bathrooms, laundry rooms, freezers, boiler rooms and other areas simultaneously for flood and temperature detection
- Minimize or avert costly damages from flooding, faulty appliances and plumbing leaks
- Help alleviate dangerous health risks from mold
- Help create a safer home and work environment
- 24/7 central station text alerts on mobile devices via Honeywell Total Connect® Remote Services

According to the American Insurance Association, “water damage claims have been growing faster than other components of homeowners insurance.”

One in 50 insured homes has a property damage claim caused by water damage or freezing each year.

Insurance Information Institute calculations, based on ISO®, a Verisk Analytics®

PRODUCT	PHOTO	NUMBER OF TEMPERATURE RANGES	REFRIGERATOR AND FREEZER MONITORING	REQUIRES FLOOD DETECTION PROBE
5821		5	Yes - requires T280R probe	Yes - requires FP280 or 470PB probe
5800FLOOD		2	No	No - standalone

Ask about our low-cost solution that can alert you in the event of extreme temperature or a potential flood incident.
