Com Port Mapping for Virtual XP Mode on Windows 7

1. Launch the Windows XP Mode on the Windows 7 machine.

2. After virtual XP mode is launched, right click on Virtual XP icon on the Task Bar. Then select “Manage Virtual Machines.” The virtual machine will be displayed (see step 3).

3. Right click on the virtual machine and selected “Settings.”
4. On the left side of the screen you will see the settings for the virtual XP mode. Click on COM1 to display the current mapped com settings for the desired comport.

5. In order to share the comport with the virtual machine you have to map it. By default the comport will be set to none. Click on “Physical Serial port” and choose the com port that will be used for the shared connection. Click on ok to accept the changes.
