

Smart User Management is Simple in AlarmNet 360™

Our new AlarmNet 360 user management process contains Feature Sets, Roles and Groups so your administrators can easily assign and manage users.

Feature Set*: A collection of features that have been logically grouped by Honeywell, which describe areas of the website that users can access.

Role**: A collection of feature sets, or permissions, selected by your company to identify which areas of AlarmNet 360 a user will have access to.

Group**: A collection of roles, and CSIDs, that enable users to access specific areas of the website and specific accounts only.

-All Dealers and central stations will see a “USERS” header with details regarding each of their users

-Dealers and central stations with 36 or more users will see “GROUPS” and “ROLES” headers with pre-populated information—in addition to the “USERS” header

**Available to all AlarmNet dealers and central stations.*

***Available to AlarmNet dealers and central stations with 36 or more users only.*
